1. Problem Statement & Ideation

Based on our user research, we have identified key challenges in current security monitoring and proposed the following solutions:

- **Problem Statement:** Traditional monitoring tools often lack automated security for administrative access, leading to unauthorized entry. Additionally, static log analysis is slow and fails to keep up with real-time threats.
- **Proposed Solutions:**
    - **RBAC Implementation:** Role-Based Access Control to separate Admin and Analyst duties.
    - **Security Automation:** Automated password updates for new users to ensure immediate initial security.
    - **AI-Driven Real-time Dashboard:** Instant categorization of logs into 'Normal' or 'Attack' using machine learning models.

3. Project Visual Identity (Branding)

A. Color Palette (utils/colors.js)

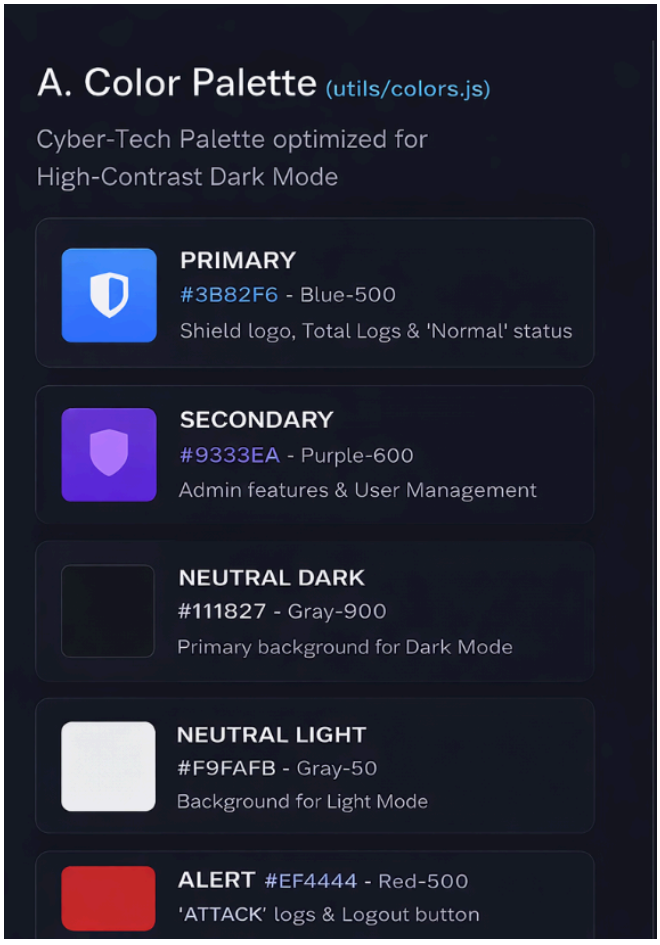
We adopted a **Cyber-Tech Palette** optimized for High-Contrast Dark Mode:

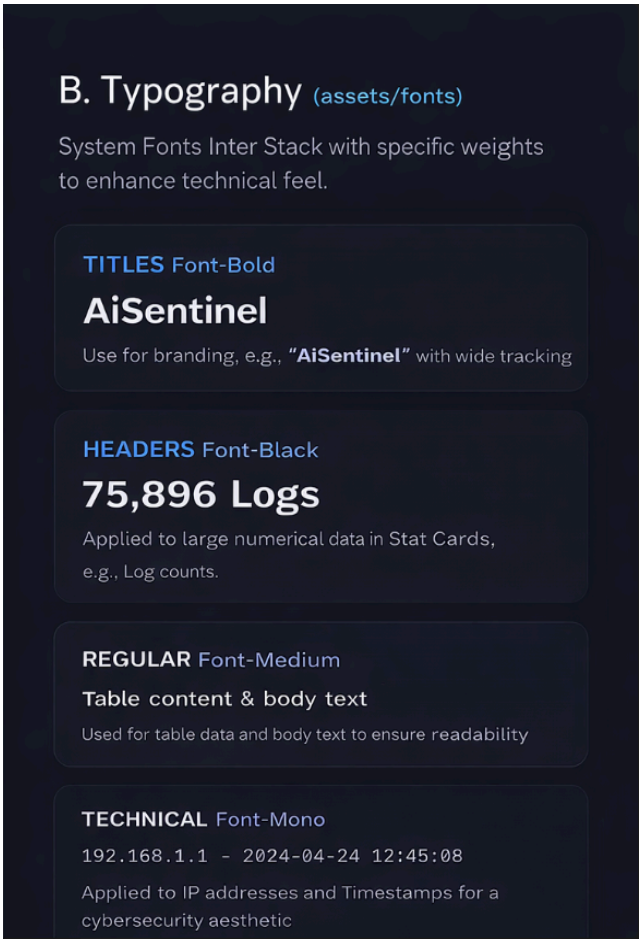
- **Primary (#3B82F6 - Blue-500):** Used for the Shield logo, Total Logs count, and 'Normal' status.
- **Secondary (#9333EA - Purple-600):** Dedicated to Admin features and the User Management interface.
- **Neutral Dark (#111827 - Gray-900):** The primary background for Dark Mode to reduce eye strain.
- **Neutral Light (#F9FAFB - Gray-50):** The background for Light Mode.
- **Alert (#EF4444 - Red-500):** Specifically for 'ATTACK' logs and the Logout button.

B. Typography (assets/fonts)

We utilized a **System Fonts Inter Stack** with specific weights to enhance the technical feel:

- **Titles (Font-Bold):** Used for branding (e.g., "AiSentinel") with wide tracking.
- **Headers (Font-Black):** Applied to large numerical data in Stat Cards (e.g., Log counts).
- **Regular (Font-Medium):** Used for table data and body text to ensure readability.
- **Technical (Font-Mono):** Applied to IP addresses and Timestamps for a cybersecurity aesthetic.





4. Component Architecture (components/ folder)

We developed re-usable custom components to ensure UI consistency:

- **Status Badges:** Capsule-shaped badges (Green for Normal, Red for Attack) with 20% background opacity.
- **Glass Icons:** Icons housed in rounded-2xl containers with glassmorphism effects for the Navbar.
- **Floating Theme Toggle:** A fixed button at the bottom-right for seamless Global Theme Switching (Dark/Light).
- **Action Buttons:** Blue or Red buttons with large shadows for high-priority actions like "Access Dashboard".
